

ENVIRONMENTAL CONSTRUCTION SOLUTIONS

Ecologically engineered, the Envirolok vegetated system provides permanent erosion control.

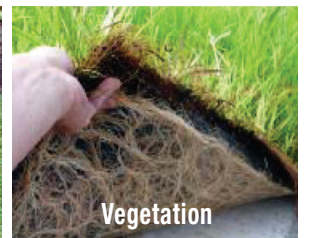

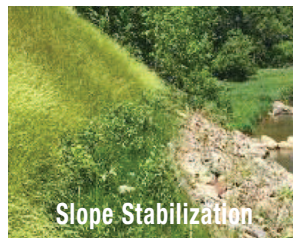

Envirolok immediately stabilizes erosive soils in both dry land and in-water sites.

Envirolok's patented soil bag technology provides a permanent vegetated solution by combining the engineered strength of soil, reinforcing materials and ecological principals.

Envirolok's patented system provides support over soft, saturated streambeds and shoreline environments while allowing construction to follow existing contours.

Envirolok supplies a permanent vegetated solution to persistent shoreline erosion which contributes to the bioaccumulation of sediment in our lakes and rivers.
