

## A Better Solution for Construction Site Washout

### All Weather Washout

Our All-Weather Washout product is designed to be a portable, EPA-friendly solution for containment of hazardous construction site washout material such as: concrete slurry, paint, drywall mud, stucco, and mortar. At a job site, the last thing you want to worry about is setting up a complicated washout for equipment and tools.

It is designed to stand up to the toughest of environments while maintaining its portability, ease of setup, and cost effectiveness. It is made from heavy-duty, woven polypropylene that shrugs off the worst climates and is still light and durable, folding flat for easy storage.

### All-Weather Washout features

- Water resistant
- Able to stay on job sites for months
- Rain fly keeps washout from filling with rain water
- Stake down loops and rain fly tie downs for windy conditions
- Lifting straps for easy removal
- Reversible sign for concrete or paint washout on the 4x4
- Highly visible safety orange
