

StormExx™ Catch Basin Filter

The same mesh & media as EnviroSoxx®—now available under the grate as a replaceable cartridge for contaminant removal

System Advantages

- Treats stormwater at the street/inlet level
- Captures trash, sediment, and soluble/invisible pollutants
- Fits any existing storm drain system
- Variable filter system suitable for high or low water flow rates
- Easy maintenance and replacement of treatment cartridges

Spec's and CADs at www.filtrex.com/specifications

StormExx™ Catch Basin Filter

StormExx uses the same EnviroSoxx mesh and media to treat stormwater, now in a replaceable cartridge for under the grate.

StormExx fits any existing storm drain, and features easy installation, maintenance, and replacement.

StormExx collects large amounts of sediment and debris in an easy to replace cartridge.

FilterMedia™ & EnviroSoxx® Sorbents

Compost FilterMedia (l) has the ability to bind fine sediments, nitrogen and phosphorus species, petroleum hydrocarbons, harmful bacteria, heavy metals, pesticides, herbicides, and other pollutants, reducing their leachability, transport in runoff, and absorption by plants. This binding effect makes compost an effective filter for stormwater runoff.

EnviroSoxx contain one or more all natural sorbents (r) used to increase pollutant removal capacity, particularly in urban watersheds, sensitive receiving waters, and TMDL (§303d) listed water bodies. EnviroSoxx are 100% formulated with all natural materials.
